

# SILAS BRACK

Copenhagen, Denmark [silasbrack.com](http://silasbrack.com) [github.com/silasbrack](https://github.com/silasbrack) [linkedin.com/in/silasbrack](https://linkedin.com/in/silasbrack)

<b>EXPERIENCE</b>	<b>AI Research Engineer</b> <i>Teton.ai – AI Research and Computer Vision</i> <ul style="list-style-type: none"><li>• Computer vision, transformers, forecasting, embedded machine learning</li></ul>	<b>Nov 2025 – Present</b> <i>Copenhagen, Denmark</i>
	<b>Machine Learning Engineer</b> <i>Saxo Bank A/S – Department of Predictive Models and AI</i> <ul style="list-style-type: none"><li>• Designed, built and deployed a real-time recommendation system serving relevant financial news to clients; to do so, we learn user and content embeddings and perform efficient nearest neighbour retrieval followed by reranking.</li><li>• Built a RAG-based chatbot yielding a 170% improvement in question-answering accuracy and decreasing the yearly number of manual agent chats by 20k, saving around \$150k in yearly agent costs.</li><li>• Built, trained and deployed an NLP-inspired embeddings model for finding similar stocks. As of February 2025, the tool sits at around 110k monthly interactions.</li></ul>	<b>Sep 2021 – Oct 2025</b> <i>Copenhagen, Denmark</i>
<b>EDUCATION</b>	<b>M.Sc. Mathematical Modelling and Computation</b> <i>Technical University of Denmark</i> <ul style="list-style-type: none"><li>• Thesis: “Effortless Bayesian Deep Learning: Tapping Into the Potential of Modern Optimizers,” with Søren Hauberg.</li></ul>	<b>Sep 2020 – Feb 2023</b> <i>Copenhagen, Denmark</i>
<b>PROJECTS</b>	<b>Marginal Likelihood Training of Linearized Laplace Approximations Without Hessian Reductions</b> <i>Supervised by Søren Hauberg – DTU Compute</i> <ul style="list-style-type: none"><li>• Developed a novel method for computing the Laplace approximation using only Jacobian-vector products in JAX, implementing posterior sampling (for inference) and the log-determinant (for optimising the marginal likelihood during training) of the Laplace covariance without explicitly instantiating it.</li></ul>	<b>Sep 2022 – Feb 2023</b> <i>Copenhagen, Denmark</i>
	<b>Bayesian Metric Learning for Uncertainty Quantification in Image Retrieval</b> <i>Supervised by Søren Hauberg – DTU Compute</i> <ul style="list-style-type: none"><li>• Developed a method for training Bayesian neural networks in metric learning and demonstrate its effectiveness on small- to large-scale image datasets in yielding well-calibrated uncertainty estimates. We proved that contrastive loss constitutes a valid log-likelihood in spherical space and present a novel decomposition of its Generalized Gauss-Newton (GGN) approximation.</li><li>• Our paper was accepted to NeurIPS 2023 [1] in New Orleans, which I had the fortune of attending.</li></ul>	<b>Apr 2022 – May 2023</b> <i>Copenhagen, Denmark</i>
<b>SKILLS</b>	<b>Languages:</b> Python, SQL, C# <b>Technology:</b> Spark, Databricks, Docker, Kubernetes, Airflow, Kafka, Terraform <b>Modelling:</b> Gradient boosting (LightGBM), deep learning (PyTorch, JAX), Word2Vec, embeddings, LLMs	
<b>PAPERS</b>	[1] F. Warburg, M. Miani, S. Brack, and S. Hauberg, “Bayesian Metric Learning for Uncertainty Quantification in Image Retrieval,” in <i>Advances in Neural Information Processing Systems</i> , 2023.
